

## **Financial Chatbot:**

- This Chatbot was develop in python with flask for style the chatbot.
- It is Rule based Chatbot
- The chatbot get the data from the csv file by filtering the company name and the keyword like revenue, income, growth and year
- If the exact match found then it return the data
- Else return the no data found message
- Use regular expression for match the user input
- I develop this chatbot like the ui of the Chatgpt
